

6. PROJECT MANAGEMENT**UNIT : 42****Author: Prof. Arun Kanda**

S. No.	Title	CD No.
1.	Project and production Management - An overview	459
2.	Project Management- An Overview	460
3.	Project identification and Screening	461
4.	Project Appraisal Part - I	462
5.	Project Appraisal Part - II	463
6.	Project Selection	464
7.	Project Representation	465
8.	Consistency & Redundancy in Project Networks	466
9.	Basic Scheduling with A-O -A Networks	467
10.	Basic Scheduling with A-O -N Networks	468
11.	Project Scheduling with Probabilistic Activity Times	469
12.	Linear Time- Cost Trade offs in Projects: A Heuristic Approach	470
13.	Project Crashing with Multiple Objectives	471
14.	Resource Profiles and leveling	472
15.	Limited Resource Allocation	473
16.	Project Monitoring and Control Using PERT/ COSI	474
17.	Team Building and Leadership in Projects	475
18.	Organizational and Behavioral Issues	476
19.	Computers in Project Management	477
20.	Project Completion, Review and Future	478
21.	Life Cycle of Production System	479
22.	Role of Models in Production Management	480
23.	Financial Evaluation of Capital Investments	481
24.	Decision Trees and Risk Evaluation	482
25.	Introducing New Products and Services	483
26.	Economic Evaluation of New Products and Services	484
27.	Product Mix	485
28.	Product and Process Designs	486
29.	Issues in Location of Facilities	487
30.	Mathematical Models for Facility Location	488
31.	Layout Planning	489
32.	Computerized layout Planning	490
33.	Product Layouts and Assembly Line Balancing	491
34.	Forecasting	492
35.	The Analysis of Time Series	493
36.	Aggregate Production Planning: Basic Concepts	494
37.	Aggregate Production Planning: Modelling Approaches	495
38.	Basic Inventory Principles	496
39.	Inventory Modeiling	497
40.	Material Requirements Planning	498
41.	Scheduling of Job Shops	499
42.	Course Summary and Review	500
