DON'T CALL UPWARDS FREQUENTLY, IIT-K TELLS PARENTS

HT Correspondent
htcitykanpur@hindustantimes.com

KANPUR: After asking B Tech (first year) students not to use their personal laptops in the institute, the IIT Kanpur administration has come up with another word of advice — this time for the parents.

The director of the premier institute Dr Indranil Manna, during an interaction with parents on Monday, advised them not to make frequent calls to their wards and avoid discussing family problems with them.

This, he said, was to allow the students to focus on their studies and nothing else.

“Besides, the parents should not pressurise their wards for achieving higher grades, as this often puts extra burden on them and this, in turn, leads to depression,” he said.

He also allayed the fear of some parents about the placement scenario and said the institute was way ahead than some other institutions.

He also had some words of wisdom for the new batch of B Tech students.

“Students should not hesitate in sharing their problems, even petty ones, with their colleagues and even teachers. They should not feel afool during their stay at the institute,” he said.

In case of any difficulty in coping up with the teaching of a particular subject, or any other issue, they should discuss it with the members of the counselling cell.

He also told the students to be disciplined and focused on their goals.

During the interaction, head of counselling cell Dr Mukesh Sharma urged the students to attend personality development courses at the institute for their overall growth.

He also said in order to reduce home sickness syndrome among the students who have for the first time come to live in a hostel, the institute had proposed to adjust two students in a room so that they could share their feelings.

President asks HRD ministry to fill vacancies

There is a shortage of faculty to the extent of 38 per cent in 43 central universities managed by the ministry of Human Resource Development.

Taking note that there were nearly 38 per cent teaching vacancies in central universities, President Pranab Mukherjee has asked the HRD ministry to fill the positions with the best of faculties.

"We are having 43 central universities managed by the ministry of Human Resource Development (HRD)...I find there is a shortage of faculty to the extent of 38 per cent in these universities. I have requested the HRD minister to take expeditious steps in filling the vacancies. We require quality teachers and we must provide incentives, so that bright students join the teaching profession," Mukherjee said while speaking at a convocation ceremony recently.

There is a need to use technology in spreading quality education across the country, said Mukherjee while stressing that lectures of the best of quality. The President noted that in a recent survey conducted by an agency, none of the country's top educational institutions figure among the world's top 200.

This was not always the case and at one time Indian universities like Takshashila and Nalanda attracted scholars from around the world, Mukherjee said. "History has shown that how nations have risen from ashes, from mediocrity, from clutches of underdevelopment on the foundation of a strong knowledge system. In contemporary times marked by technological and economic advancement, knowledge is an important channel for shaping the destiny of nations," he said.

"Economic growth depends on a successful mobilisation of the knowledge economy, which in turn has its basis in a robust education system," he added. Addressing the students who had graduated, Mukherjee said, the nation had invested in them, but did not want big sacrifices in return.

The nation only asks you to understand your duties and responsibilities well, he said.

Earlier, while commenting on the spurt in crimes against women at another convocation ceremony, he had said that these incidents had shaken the collective conscience of the nation and educational institutes should act to take on the moral challenges the country faces.

"The recent increase in cases of brutal assault on women and children has shaken the collective conscience of our nation. These unfortunate incidents call for effective measures to ensure their safety and security," Mukherjee said.

"It also highlights the need for us to bring such degradation of values to an immediate halt. Our institutes, beginning from schools, must act as guides in meeting the contemporary moral challenges," he added.

Mukherjee said India today stands at "the cusp of greatness" where there were challenges but also enormous opportunities ahead.

"Science and technology is duly recognised as the vehicle to take India into the front ranks of the nations of the world. We have to build a large pool of scientific and technical manpower to aid our progress", The President also said the country has a growing young population and within a decade it was likely to have the largest workforce in the world. This demographic transformation must be leveraged by us by expanding technological education in the country, he said.

He, however, said "the higher education sector in India today does not have enough good quality institutions to meet the growing aspirations of our youth".

"Along with measures to increase quantity, the drive to enhance the quality of education should engage the attention of our policy makers," Mukherjee said.
Centre asks states to get higher educational institutions accredited

Despite rule, many institutions are yet to apply for accreditation

NEW DELHI: The Centre has asked state governments to impress upon all higher educational institutions functioning under them to get accredited. A majority of these institutes are yet to apply for accreditation despite the University Grants Commission (UGC) making it mandatory.

According to sources, at a meeting of the state higher education secretaries here, the Human Resource Development (HRD) Ministry suggested them to disseminate amongst the state higher educational institutions the need to undergo assessment and accreditation.

The Ministry also asked the states to familiarise the institutions with the processes required for seeking accreditation, assuring them of full support by the National Assessment and Accreditation Council (NAAC) and the National Board of Accreditation (NBA).

"A large number of institutions are yet to apply for accreditation despite the notification issued by the UGC in March. The role of state governments is significant in getting all the institutions accredited as it would enable the higher education system of the country to become part of the global quality assurance system," a HRD Ministry official said. Recently, the UGC made assessment and accreditation of higher educational institutions mandatory across the country. The HRD Ministry decided to introduce it through an executive order as the National Accreditation Authority Bill is pending in Parliament for nearly three years.

The All India Council for Technical Education (AICTE) has also approved regulations for mandatory assessment and accreditation of technical institutions. "These will be notified shortly," a HRD Ministry official said. The Ministry suggested the states to adopt mandatory accreditation as one of the norms for deciding state funding in the days to come. The Ministry also asked the states to explore formation of credible assessment and accreditation agencies, sources privy to the meeting of state secretaries said.

At the meeting, the Ministry told the states that accreditation agencies should be registered as non-profit entities. They should be academically and financially an autonomous body. In this regard, required assistance can be extended by NAAC or NBA. Funding can be extended through Rashtriya Uchchhatra Shiksha Abyayan, "sources added.

"The formation of the National Accreditation Regulatory Authority, the UGC and AICTE will be the body according recognition to the state accreditation agencies. The procedure outlined in the Bill will be applied for according recognition to the institutions," a Ministry official said.
